

Working group 5: Synthesis of results

Objectives

In working group 5, the results from working groups 1 to 4 are aggregated and exchange between project partners is encouraged. The aim is to develop integrated recommendations for action for successful development and implementation of climate change resilient neighbourhoods. The recommended courses of action are intended to demonstrate the importance of green infrastructure for municipal decision-making processes and to promote their integration into urban development.

Methods

Working group 5 acts integratively and across all working groups. Throughout the entire research and development phase:

- Project meetings and workshops to exchange content between the project partners are organized
- Selection and processing of the living labs are agreed and coordinated with the City of Munich
- Scheduling of work in the working groups will be coordinated
- Compliance with project objectives and quality of results will be supervised
- Verification of practical suitability of the results for the living labs is ensured
- The project network will be represented in public at a regional and national level.
